

Are The Rising Costs of Computers And Technology Causing You To Need One Of These?

From: **Larry Zimble**
President, Liberteks.com

Is your computer budget becoming **too big to ignore**?

Are you constantly **getting hit with unforeseen costs** to fix or upgrade your machines yet the darn things still go down like clockwork, run slow, and cause problems?

Would you like to find ways to **get more out of the technology you already own** instead of constantly dumping more money into new hardware, software, and upgrades?

If so, I can help.

My name is Larry Zimble and I am President of Liberteks.com. My company specializes in helping small companies like yours in the Capital District area get the maximum usage out of their current technology.

Why I Decided To Write To You

My guess is that you have enough employees and workstations to need regular tech support, but not enough to cost-justify having a full-time IT person on your payroll.

That means you either have someone you are already outsourcing your tech support to, or you have an internal power user that also has another role such as accountant, office manager, or some other non-IT career supporting your network.

Either Way, You Might Not Be Getting Your Money's Worth

Any smart business owner will tell you that it just makes sense to outsource day-to-day low margin technical support tasks so employees can focus on higher-level, revenue producing activities.

But make no mistake - not all computer consultants are created equal, and outsourcing your tech support to the wrong consultant can end up costing your small business a small fortune.

The question is, which ones will solve your problems quickly and inexpensively, and which ones will be impossible to reach in an emergency, over bill you for their hours, and possibly make things worse?

We Can Make Your Computer Network Pay Off While Practically Eliminating All Of Your Computer Problems Finally and Forever

Most IT consultants simply put band aide fixes on computer network problems and REACT to problems instead of looking for ways to PREVENT them from happening in the first place.

This reactive model of network maintenance is a surefire path to extensive downtime, lost data, and excessive spending on IT support, not to mention major disruptions in staff productivity, sales, cash flow, production, and customer service that can never be recovered.

We take an entirely different approach with our clients...

Thanks to our remote monitoring and maintenance plan, we can proactively monitor and maintain your network and help you AVOID problems that can lead to expensive disasters. This not only eliminates day-to-day network problems that interrupt your business, but it also significantly lowers your overall IT costs by as much as 30% to 45% per year on average.

Don't Take Our Word For It; Just Look At What Our Clients Have To Say...

Many of the people in my organization utilize Larry and his firm to take care of their IT and computer needs. He is the best in the business, and I highly recommend his firm for their utmost professionalism.

-Steve Clem, CEO of Business Networking International

Earlier this month, on very little notice, you and your team; working with remote diagnostics and onsite manpower stabilized our network and identified, within minutes, a setting that had been causing us problems for several years. We will continue to use your services, appreciate your sound advise and refer your company to our clients. Thanks again.

-Dan Alcorn, Atlantic Payment

I'd Like To Offer You A FREE Instant Support Session To Prove That We Can Make Your Computer Headaches Go Away

As a prospective customer, I'd like to offer you a FREE, Instant Support Session to demonstrate how we can help you trim the fat from your technology budget while improving the performance, reliability, and security of your network.

We'll show you how to:

- ✓ **Start saving money right away** on upgrades, hardware, software, Internet costs, and possibly even your phone bill.
- ✓ **Secure your network** from viruses, spyware, hackers, and other threats.
- ✓ **Tame the two most troublesome and costly devices on every computer network:** routers and printers.
- ✓ Improve the reliability of your network to **avoid unexpected downtime and costly problems.**
- ✓ **Dramatically increase the speed of your network and the productivity of your workers.**

- ✓ **Protect your irreplaceable data** from getting fried by utility power surges or wiped out by a virus.
- ✓ Know exactly **what IT investments you should be budgeting for** and which ones you can live without.

Our "No Strings Attached" Promise

I also want to be very clear that there are no expectations on our part for you to do or buy anything when you take us up on our offer.

As a matter of fact, I will give you my personal guarantee that you won't have to deal with a pushy, arrogant sales person, because I don't appreciate heavy sales pressure any more than you do.

Instead, we're betting that once you see how we can save your company from overspending on IT, how responsive we are, and how much we appreciate our customers, you'll want to use us for all of your future projects and support.

There Is No Catch...But You Have To HURRY!

While I would love to give away a free Instant Support Session to everyone, time and staff limitations simply will not allow me to. That is why I must limit the number of free sessions to 7 companies.

To sign up for your FREE Instant Support Session, simply visit our website and fill out the form. Someone from our office will set a convenient time for one of our senior technicians to start the session.
